Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Bob is tasked with developing a company's employee record management system. The system needs to maintain a list of employee records using a doubly linked list. Each employee is represented by a unique integer ID.

Help Bob to complete a program that adds employee records at the front, traverses the list, and prints the same for each addition of employees to the list.

Input Format

The first line of input consists of an integer N, representing the number of employees.

The second line consists of N space-separated integers, representing the employee IDs.

For each employee ID, the program prints "Node Inserted" followed by the current state of the doubly linked list in the next line, with the data values of cost separated by spaces.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 4
      101 102 103 104
      Output: Node Inserted
      101
      Node Inserted
      102 101
      Node Inserted
      103 102 101
      Node Inserted
      104 103 102 101
      Answer
      #include <iostream>
      using namespace std;
      struct node {
        int info;
         struct node* prev, * next;
      struct node* start = NULL;
      void traverse() {
         struct node* temp;
         temp = start;
         while (temp != NULL) {
           cout << temp->info << " ";
           temp = temp->next;
cout << endl;
```

```
2176240801744
void insertAtFront(int data) {
    struct node* temp;
    temp = new
                                                               2176240801744
           temp->info = data;
           temp->prev = NULL;
           temp->next = start;
           if (start != NULL)
             start->prev = temp;
           start = temp;
           cout << "Node Inserted\n";
                                                                                              2176240801744
        }
                                                               2116240801144
          cin >> n;
for (int i = 0; i < n; ++i) {
  cin >> data;
  insertAtFro
        int main() {
ont n, dat
cin >> n;
for (in
          int n, data;
             traverse();
           }
           return 0;
        }
```
